

## Mirror a part

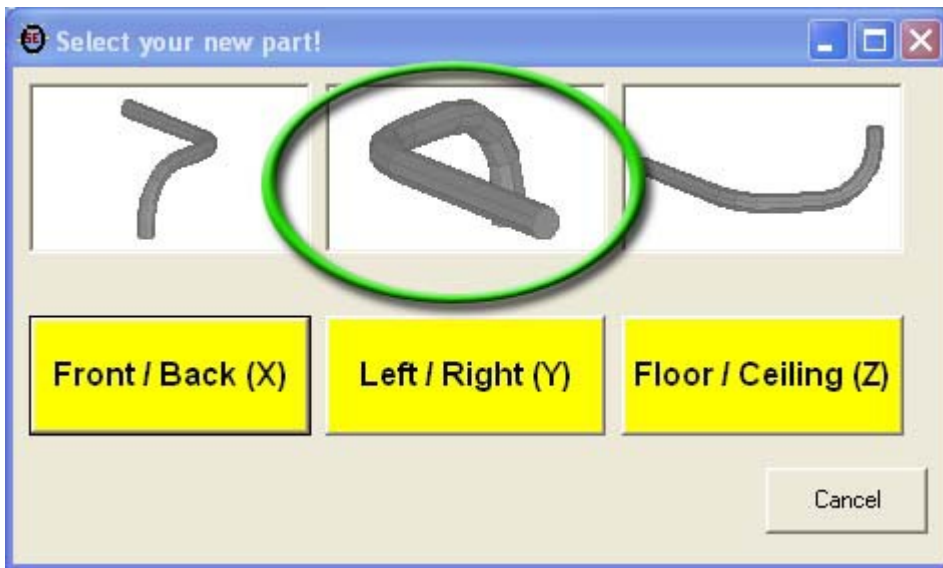

This thread will cover how to mirror a part.

Step 1) Select the part from the "Master Part List" you wish to mirror.

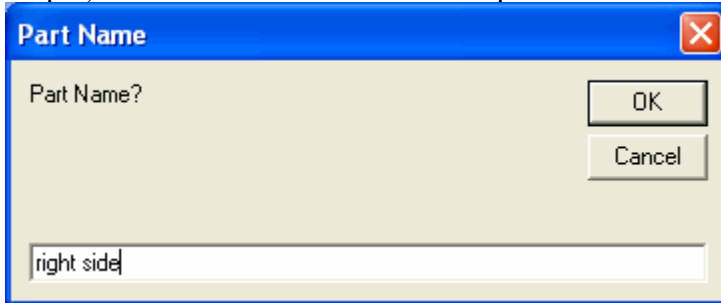

Step 2) Select the "Mirror" command button.

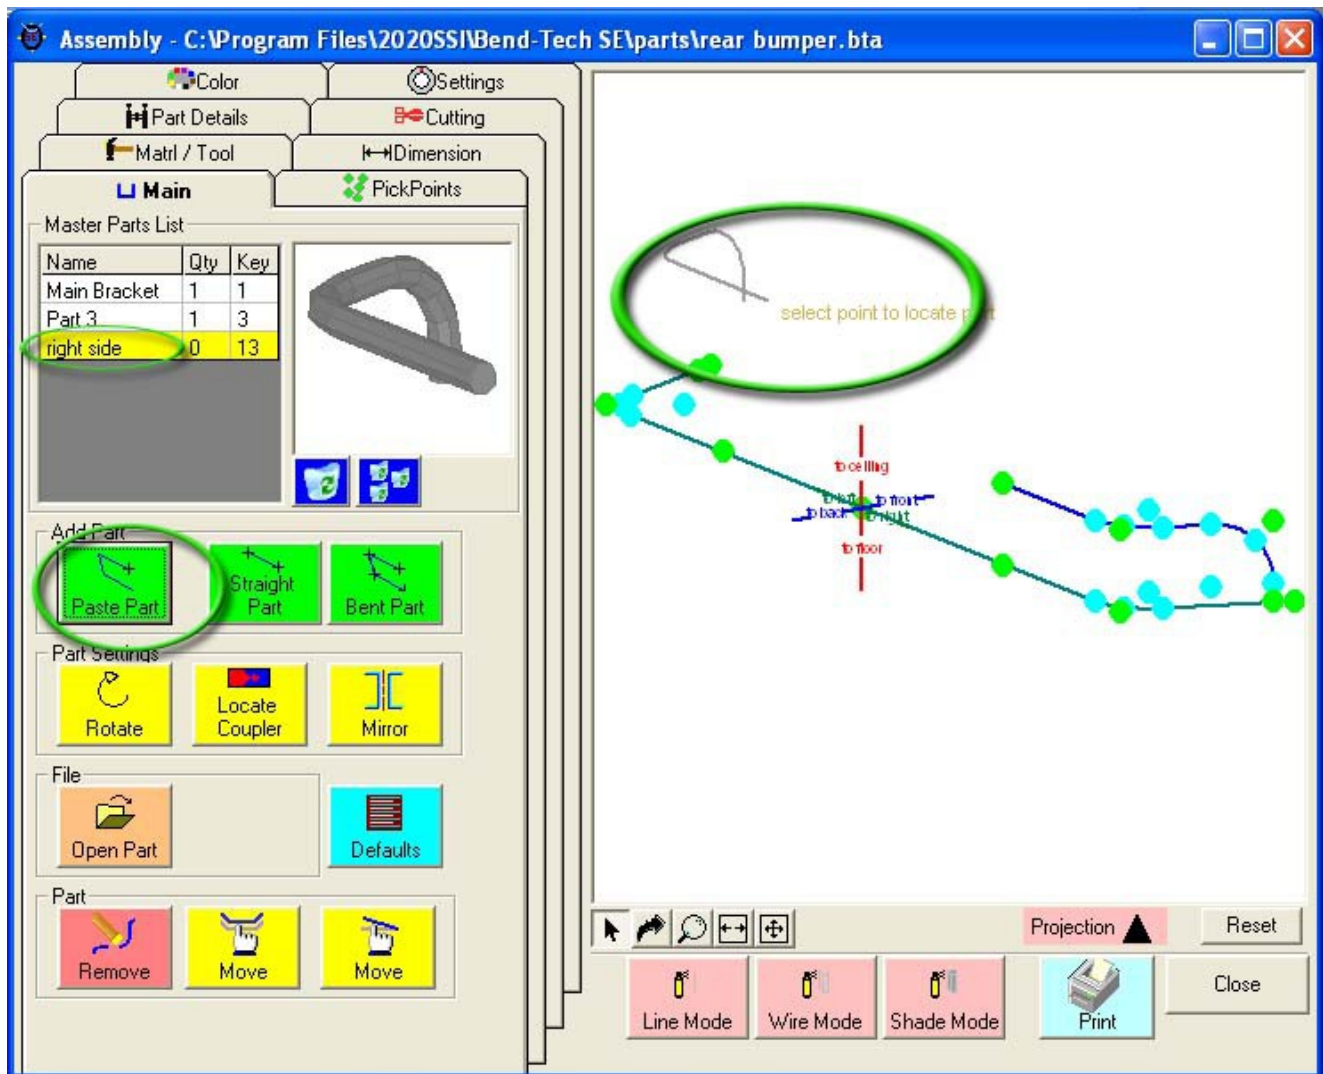

Step 3) Select the mirror direction that best describes your part.

Step 4) Give the new mirrored master part a new name.

- Step 5) Select the part from the Master List.
- Step 6) Select the "Paste Part" command button.
- Step 7) Select the PickPoint to attach the part.

**Note: The attach point is the same as the start feature when the part was created.**
