

PickPoints - 2 Points

The PickPoint - 2 Points method allows for a point to be located "x" number of millimeters or inches down a line.

Step 1) Select the "**PickPoints**" tab, then the "**2 Points**" tab.

Step 2) Select the "**Add PickPoint 2 Points**" command button.

Step 3) Select a "**PickPoint**" for the start end of the line. Note: The distance value will be determined from this end.

Step 4) Select the 2nd "**PickPoint**" representing the line.

Step 5) Enter in the "**Delta**" move down the line. You will see a magenta point at this location.

Step 6) Select the "**Apply**" command.
