

My software only came with 1 tool and 1 material

My software only came with 1 tool and 1 material.

That is correct. We are asked almost daily as to why we don't include a "complete" list. Keep in mind our software is used on just about every tube, pipe and rod bender available. The material and tooling list would be endless.

-> You don't want to sift through thousands of items in a list to find the few tools or materials that you use.
