PickPoints - 2 Points

The PickPoint - 2 Points method allows for a point to be located "x" number of millimeters or inches down a line.

Step 1) Select the "**PickPoints**" tab, then the "**Reference**" tab.

Step 2) Select the "**Set Line**" command button under **Two Points**.

Step 3) **Select a "PickPoint"** for the start end of the line. Note: The distance value will be determined from this end.

Step 4) **Select the 2nd "PickPoint"** representing the line.

Step 5) Enter the value into the "**Move Amount**" field. You will see a Purple point at this location.

Step 6) Select the "**Apply**" command.
