

# Hole Saw/Mill vs. Plasma/Grinder

Using a hole saw or mill requires a different cut versus a plasma or grinder cut.

A hole saw or mill creates a knife edge to the tube. Where a plasma or grinder cut will create a cut straight across the wall.

The green cut line represents the cut for a hole saw and the black cut line represents that for plasma or grinder line.

Using a hole saw requires the checking of the outside of the material only. "**Check**" the option "**Outside Diameter Only**".

☒ Outside Diameter Only

Using a grinder or plasma cutter requires checking of both sides of the material. "**UnCheck**" the option "**Outside Diameter Only**".

☐ Outside Diameter Only
