Software Engineer

Bend-Tech: Innovators of Tube & Pipe Fabrication

Bend-Tech takes pride in providing products that innovate the way tube and pipe are designed and fabricated. We are continuously pushing this industry forward with tools that promote efficiency and accuracy. Since 2001 Bend-Tech has been growing into the company we are today. At our headquarters in Osceola, Wisconsin, all our employees strive for Honesty, Innovation and Quality in everything they do.

Position Overview

We are seeking a software engineer that enjoys developing with a passion and has a hunger for learning. You will collaborate with other developers and project managers to create and maintain the various software applications we use to streamline our business and increase our efficiency. This is a great opportunity to work on a friendly team of dedicated professionals in a culture that values teamwork, continuous learning, and service. If you enjoy pushing the boundaries in automation and seeing your hard work, get used in industries all over the world then apply today!

Job Description and Basic Qualifications

- Proficiency in at least one programming language, such as Python, SQL, Java, C#, C++, Ruby, PHP, or JavaScript
- Proficiency with data structures, algorithms, and computer science fundamentals
- Experience with version control using tools such as Git
- Experience with testing tools and computer systems
- Experience with build tools and development processes
- Excellent analytical, problem solving, written and oral communication skills
- Bachelors or higher in C.S. Mathematics, Electrical Engineering or equivalent
- Proven experience as a software engineer
- This is not a remote position. Must be able to commute daily to Osceola

Desired Skills:

- Ability to juggle multiple projects, tasks, and deadlines
- Self-motivate and self-directed: We need someone who will proactively tackle challenges and propose innovated solutions

- Ability to mentor team members to support knowledge development through coaching, training, and collaborative feedback
- Remain current on state-of-the-art development platforms, tools, and techniques
- Ability to devise implementation strategies for appropriate technology advancements

Job Duties and Responsibilities

- Design, debug, and build software applications
- Perform code walk-throughs to ensure code correctness
- Work with other engineers to architect, build, and test new features
- Participate in code reviews and test designs
- Work in an agile environment to release software on a regular schedule
- Test software applications and debugging to ensure that they meet business requirements
- Troubleshoot existing software and resolve any problems
- Conduct design reviews to confirm that software architecture is sound
- Improve and document existing software and tools

Hours, Pay, Benefits

Full-time Monday-Friday 7:00 AM-4:00 PM

We generously reward hard work and initiative. We offer a full benefits package that gives our employees both unique perks and peace of mind, including medical, dental, vision, life and disability insurances and 401 (k) with matching.

Salary based on experience
